INSPECTION REPORT COMMENTS**Comments:**

A routine inspection was conducted at Keystone Sanitary Landfill with KSL site manager Dominick Denaples and Robert Laczi of the PA DEP. The following items/elements were observed/discussed:

Access road and road leading to the working face were observed to be free of litter and debris. Water truck was in operation for the purpose of dust suppression.

Working face operations were observed to be accordance with Departmentally approved methods. Two working faces in Pad 12 were in use at the time with two compactors and bulldozers in use at each of the working faces to ensure proper compaction of waste is achieved. Employees were observed to be monitoring waste where the eight feet of select waste was being placed on the protective cover to reduce the risk of materials puncturing the liner.

Slopes were observed to be in good condition with no leachate seeps noted at the time of the inspection. Erosion gullies caused by recent heavy rain continue to be addressed as part of routine maintenance. No litter was noted on any of the slopes and all waste was contained within the working face areas.

No off site odors were noted at the time of inspection.

Leachate in storage in the lagoons at the time of inspection was at 67% capacity. Approximately 350,000 gallons of leachate was being stored in the temporarily approved above ground storage tank and no leachate was being stored in the temporary 1.68 million gallon tank. No treated effluent has been sent off site via outfall O2 (Reeves Street manhole D225) to the Pennsylvania American Water Scranton Waste Water treatment plant. Facility continues to aggressively ship leachate off site to reduce leachate volume.

There have been no problems to report with the gas collection system. Gas is sent to PEI with the remainder being flared off.
